Proposal in response to

RFP-2026-041 — Cloud-based Real-Time Passenger Information & Fleet Operations Platform

Metro Transit Authority (MTA)

Submission date: September 13, 2026

1. Executive Summary

Orbit Digital brings 15 years of experience and 60+ successful public-sector technology programs to RFP-2026-041. We propose Orbit JourneyView, our mature passenger information platform, delivered for a fixed price of \$442,000 on an 8-month timeline. Agencies choose Orbit for one reason: we have done this before, many times, and our references will tell you so.

Our proposal emphasizes proven delivery and deep operational experience. JourneyView is live today at nine transit agencies, and our team includes specialists who have run transit control rooms themselves.

2. Understanding of Requirements

MTA seeks a unified platform for real-time fleet visibility, rider communications via app and signage, dispatcher operations, integration with CAD/AVL and fare systems, high availability, accessibility, and delivery within 12 months. Orbit's response draws on directly comparable deployments to de-risk every element.

3. Proposed Solution & Technical Approach

Orbit JourneyView is a mature, field-hardened platform processing real-time feeds for over 3,000 vehicles daily across our client base. The system publishes GTFS-RT and powers mobile apps, signs, and control-room video walls from a single operational data core.

On integration: our integration plan is described at a high level in this proposal. The specific approach for MTA's legacy CAD/AVL interfaces remains vague pending discovery workshops, and the data migration plan is unclear at this stage. Scalability has limited detail beyond our current client footprint. We propose to finalize these elements jointly in the first four weeks, supported by an open API that has served third-party developers for six years.

- Mature platform: 3,000+ vehicles under management across nine agencies.
- Single operational data core feeding app, signage, and control room.
- Open API with six years of third-party developer support.

4. Implementation Plan

Our 8-month program follows a proven four-stage rollout used in nine prior deployments, with milestones at each stage gate and a dedicated transition manager.

Table 1 — Implementation milestones

Phase	Duration	Key milestones / deliverables
1. Discover	6 weeks	Workshops; milestone: requirements baseline
2. Configure	12 weeks	Platform configuration; milestone: integrated demo
3. Trial	6 weeks	Live trial operation; milestone: trial sign-off
4. Launch	8 weeks	Full launch; milestone: operational handover

Staffing: 1 transition manager, 1 solution lead, 3 consultants, 1 trainer. Our phased cutover approach has been refined across many go-lives; dispatcher training is delivered by former control-room staff.

5. Price Proposal

Fixed price: \$442,000. While this is a higher price than some competitors, it includes our most senior delivery team and an extended 60-day hypercare period.

Table 2 — Price breakdown (fixed price)

Item	Amount (USD)
JourneyView platform licenses (3 years)	\$170,000
Delivery & configuration services	\$175,000
Signage integration (120 signs)	\$42,000
Training & documentation	\$25,000
Year-1 support & 60-day hypercare	\$30,000
Total fixed price	\$442,000

- Assumption: MTA legacy system documentation is made available at kickoff.
- Assumption: integration effort capped at 400 hours; excess at \$210/hour.
- Payment terms: 25% kickoff, 25% at integrated demo, 50% at operational handover.

6. Security, Compliance & Risk

Orbit Digital holds SOC 2 Type II certification, renewed annually. All rider and operational data is encrypted at rest (AES-256) and in transit (TLS 1.2+). Access control is role-based with MFA for privileged accounts, and we retain immutable audit logs for two years to support auditability.

Our privacy framework minimizes personal data collection and our incident response plan is tested annually via tabletop exercises with client participation.

7. Support Model, Experience & References

Support is a signature strength: 24/7 staffed operations center, 99.95% uptime SLA, named account manager, and quarterly optimization reviews. Our support organization has earned a 96% satisfaction rating across our client base.

Our track record is unmatched in this competition: 15 years in business, 60+ public-sector programs, and similar project experience at nine transit agencies including Grand Central Transit (700 vehicles), Bayline Metro (550 vehicles), and MetroSouth (480 vehicles). We enclose six references with direct contact details — more than any competitor — and invite the Authority to call every one of them.
